**Digital Governance** Michael E. Milakovich, 2012-04-23 The application of digital information and communication technologies ICTs to reform governmental structures politics and public administration is widely and perhaps naively viewed as the twenty first century savior the enlightened way to reinvigorate democracy and improve the quality of citizen services In this timely and thorough analysis Michael Milakovich examines the assumptions underlying the e government revolution in light of the financial exigencies facing many commercial enterprises governments and other organizations Computer driven information and communications technologies are impacting all aspects of public sector service delivery worldwide and many governments are moving away from an agency centric toward a more citizen centric approach to offering online services This book explores the transition from electronic government e gov to digital or d governance emphasizing the importance of citizen participation and information technology to accomplish the change The chapters concentrate on strategies for public administration organizational transformation and their implications for improved and measurable government performance Digital self governance is a broader umbrella term referring to the networked extension of ICT relationships to include faster access to the web mobile service delivery networking teleconferencing and use of multi channel information technologies to accomplish higher level two way transactions The shift from bureaucracy centered to customer centric service orientation is viewed as a means to restore public trust and improve service quality Digital governance is the next step for governments at all levels to reduce costs meet citizen expectations and

achieve economic recovery goals      **Bringing Government into the 21st Century** Tina George Karippacheril, Soonhee Kim, Robert P. Beschel Jr., Changyong Choi, 2016-06-28 This volume a collaborative work between the World Bank's Global Governance Practice and a team of researchers working with the Korean Development Institute is dedicated to the proposition that there is much that can be learned from a careful and nuanced assessment of Korea's experience with e governance It seeks to draw lessons both from the large reservoir of experience as to what has worked as well as the more limited and isolated examples of what has not In particular it seeks to achieve two objectives The first is to accurately understand capture and distill the key dimensions of Korea's e governance experience so that it can be properly understood and appreciated Towards this end some of the world's leading experts on Korea's e governance experience have been engaged in its preparation and their conclusions have been carefully vetted and reviewed by other leading scholars of the role of IT systems within government The goal is to avoid flip generalizations or characterizations such as political will is important or it is important to embed e governance within a broader strategy to develop a domestic IT industry but to truly understand the complex interplay between differing political economic and bureaucratic interests and how they shaped decisions about developing the technological and human infrastructure that would support Korea's successful thrust to be the world's leading nation in this area The second is to ponder the lessons learned and what did and did not work from Korea's experience for other developing countries seeking to strengthen the role of information technology within their public sectors      **e-Transformation: Enabling New Development Strategies** Nagy K. Hanna, 2009-11-11 Could information and communication technology ICT become the transformative tool for a new style of global development Could ICT promote knowledge based innovation driven and smart adaptive participatory development As countries seek a way out of the present period of economic contraction they are trying to weave ICT into their development strategies in the same way organizations have learned to use ICT to transform their business models and strategies This integration offers a new path to development that is responsive to the challenges of our times In e Transformation Nagy Hanna identifies the key ingredients for the strategic integration of ICT into national development with examples from around the world He draws on his rich experience of over 35 years at the World Bank and other aid agencies to outline the strategic options involved in using ICT to maximize developmental impact transforming public service institutions networking businesses for innovation and competitiveness and empowering communities for social inclusion and poverty reduction He identifies the key interdependencies in e transformation and offers a holistic framework to tap network effects and synergies across all elements of the process including leadership cyber policies institutions human resources technological competencies information infrastructure and ICT uses for government business and society Integrating analytical insights and practical applications across the fields of development political economy public administration entrepreneurship and technology management the author candidly argues that e transformation like all bold ideas faces implementation challenges In particular the aspiration reality gap needs

to be systematically addressed if ICT enabled innovation and transformation is to become a development practice. E transformation is first and foremost about thinking strategically and creatively about the options made possible by the information technology revolution in the context of globalization. To this end, the author provides tools and best practices designed to nurture innovation, select entry points, prioritize among competing demands, and sequence and scale up. He outlines the roles of all participants: political, managerial, entrepreneurial, social, and technical, whose leadership is essential for successful innovation. *na* Springer, 2013-02-14 2009 Information and Communications for Development World Bank, 2009-01-01 Over the last decade, information and communication technologies (ICT) have been increasingly used to achieve development goals. Developing countries, including poorer ones, have enjoyed rapid technological progress to help pull millions of people out of poverty. ICTs help transform economic and social activities for firms, governments, and citizens. Information and Communication for Development 2009 Scaling Up Impact: the second issue of the World Bank's IC4D series focuses on the effect of increased access to advanced ICT services and development of a vibrant IT sector on sustaining growth. **Management, Technology, and Economic Growth in Smart and Sustainable Cities** Ruiz-Vanoye, Jorge A., 2023-10-24 Rapid urbanization poses significant challenges for cities worldwide, demanding sustainable development solutions. From practically nothing, a revived network of these land corridors is likely to lead to a considerable share of the freight revenues being generated by the increased trade between Asia and Europe. That is why there is fierce competition among the major players for control in shaping the Asia-Europe railway transport corridors. However, there are also new and exciting possibilities for

cooperation among the various players We will extensively examine and evaluate the transport corridors linking Asia and Europe The Baku Tbilisi Kars railway project will be assessed from the perspectives of the three countries involved Azerbaijan Georgia and Turkey It has been shown that the railroad will economically strengthen the region and better integrate the three host countries into international transport corridors The Baku Tbilisi Kars railroad will certainly play a key role in helping to revive the Silk Road connection thereby creating common interests and facilitating the transformation of the region The BTK transport corridor will not only stimulate the economies of the countries involved but help wean them their off oil dependence and restore their rightful place as major commercial hubs along the once legendary Silk Road The attraction of direct foreign investment and establishment of partnerships between the public and private sectors are key issues that will be explored in depth in this book By 2025 the region is expected to become a prosperous financial sector and transit area a comprehensive strategy to that end which incorporates the principles of sustainable growth is being formulated by the countries involved
