Dynamics of Complex Interconnected Biological Systems Jennings, Mees, Vincent, 2012-12-06 This volume contains the proceedings of the U S Australia workshop on Complex Interconnected Biological Systems held in Albany Western Australia January 1 5 1989 The workshop was jointly sponsored by the Department of Industry Trade and Commerce Australia and the National Science Foundation USA under the US Australia agreement Biological systems are typically hard to study mathematically This is particularly so in the case of systems with strong interconnections such as ecosystems or networks of neurons In the past few years there have been substantial improvements in the mathematical tools available for studying complexity Theoretical advances include substantially improved understanding of the features of nonlinear systems that lead to important behaviour patterns such as chaos Practical advances include improved modelling techniques and deeper understanding of complexity indicators such as fractal dimension Game theory is now playing an increasingly important role in understanding and describing evolutionary processes in interconnected systems The strategies of individuals which affect each other's fitness may be incorporated into models as parameters Strategies which have the property of evolutionary stability result from particular parameter values which may be the main feature of living determined using game theoretic methods Since systems do evolve it seems appropriate that any model used to describe such systems should have this feature as well Evolutionary game theory should lead the way in the development of such methods
