procedure requires first identifying representative tasks associated with the device and then testing the subjects ability to accomplish those tasks The procedure was able to demonstrate the subjects wide ability to accomplish tasks and the influence of a device s usability on success rates A metric based on the time to accomplish the tasks and the fraction of subjects actually completing the tasks captured the key aspects of each thermostat s usability The procedure was recently adopted by the Energy Star Program for its thermostat specification The approach appears suitable for quantifying usability of controls in other products such as heat pump water heaters and commercial lighting
