Early Prediction Models For Software Reliability:

Early Prediction Models for Software Reliability Gopika Vinod,Rajib Mall,2013-09-19 Early Software Reliability Prediction Ajeet Kumar Pandey,Neeraj Kumar Goyal,2013-07-12 The development of software system with acceptable level of reliability and quality within available time frame and budget becomes a challenging objective This objective could be achieved to some extent through early prediction of number of faults present in the software which reduces the cost of development as it provides an opportunity to make early corrections during development process The book presents an early software reliability prediction model that will help to grow the reliability of the software systems by monitoring it in each development phase i e from requirement phase to testing phase Different approaches are discussed in this book to tackle this challenging issue An important approach presented in this book is a model to classify the modules into two categories a fault prone and b not fault prone The methods presented in this book for assessing expected number of faults present in the software assessing expected number of faults present at the end of each phase and classification of software modules in fault prone or no fault prone category are easy to understand develop and use for any practitioner The practitioners are expected to gain more information about their development process and product reliability which can help to optimize the resources used

Strategic Engineering for Cloud Computing and Big Data Analytics Amin Hosseinian-Far,Muthu Ramachandran,Dilshad Sarwar,2017-02-13 This book demonstrates the use of a wide range of strategic engineering concepts theories and applied case studies to improve the safety security and sustainability of complex and large scale engineering and computer systems It first details the concepts of system design life cycle impact assessment and security to show how these ideas can be brought to bear on the modeling analysis and design of information systems with a focused view on cloud computing systems and big data analytics This informative book is a valuable resource for graduate students researchers and industry based practitioners working in engineering information and business systems as well as strategy *An Analysis of Early Software Reliability Improvement Techniques* John G. Leonard,Ric K. Nordgren,1997-12-01 This research explores early life cycle software reliability prediction models or techniques to predict the reliability of software prior to writing code and a method for increasing or improving the reliability of software products early in the development life cycle Five prediction models and two development techniques are examined Each model is statically analyzed in terms of availability of data early in the life cycle ease of data collection and whether data is currently collected One model and the two techniques satisfied those requirements and are further analyzed for their ability to predict or improve software reliability While the researchers offer

no significant statistical results of the model's ability to predict software reliability important conclusions are drawn about the cost and time savings of using inspections as a means of improving software reliability The results indicate that the current software development paradigm needs to be changed to use the Cleanroom Software Development Process for fixture software development This proactive approach to developing reliable software saves development and testing costs One obvious benefit of this research is that cost savings realized earlier in the software development cycle have a dramatic effect on making software development practices better and more efficient Software Process Improvement and Capability Determination Paul M. Clarke, Rory V. O'Connor, Terry Rout, Alec Dorling, 2016-05-11 This book constitutes the refereed proceedings of the 16th International Conference on Software Process Improvement and Capability Determination SPICE 2016 held in Dublin Ireland in June 2016 The 28 full papers presented together with 5 short papers were carefully reviewed and selected from 52 submissions The papers are organized in the following topical sections SPI in regulated and safety critical domains gamification and education issues in SPI SPI in agile and small settings SPI and assessment SPI and project management concerns empirical research case studies of SPI knowledge and human communications issues in SPI
