Emerging Local Politics in Indonesia Wawan Sobari,2023-10-05 This book provides a richer understanding of democratic local politics in Indonesia after the implementation of local direct elections in 2005 Co published with the University of Airlangga Press it confronts the question as to why incumbent political leaders succeed and fail in their bid for re election By focusing on urban and rural districts in East Java one of the most populated regions in Indonesia the work unpacks the general trends of local Indonesian politics drawing from an empirically sound and theoretically well grounded case study The author demonstrates that good policy performance does not guarantee the political survival of the incumbent and reversibly bad policy performance does not necessarily mean losing political power It considers the core political strategies of populism rivalry and tangibility and cautions that rather than helping liberal democracy to grow these strategies support patronage driven democracy Within this system a small number of vital protectors and defenders control patronage and problematically exert influential control over the country s electoral processes Relevant to scholars and students in Indonesian studies and within political science and Asian studies more broadly this book follows a gripping and nuanced narrative that explains the relationship between policy choices informal politics voting behavior and political survival in Indonesia *Data-driven BIM for Energy Efficient Building Design* Saeed Banihashemi,Hamed Golizadeh,Farzad Pour Rahimian,2022-12-16 This research book aims to conceptualise the scale and spectrum of Building Information Modelling BIM and Artificial Intelligence AI approaches in energy efficient building design and to develop its functional solutions with a focus on four crucial aspects of building envelop building layout occupant behaviour and heating ventilation and air conditioning HVAC systems Drawn from theoretical development on the sustainability informatics and optimisation paradigms in built environment the energy efficient building design will be marked through the power of data and BIM

intelligent agents during the design phase It will be further developed via smart derivatives to reach a harmony in the systematic integration of energy efficient building design solutions a gap that is missed in the extant literature and that this book aims to fill This approach will inform a vision for future and provide a framework to shape and respond to our built environment and how it transforms the way we design and build By considering the balance of BIM AI and energy efficient outcomes the future development of buildings will be regenerated in a direction that is sustainable in the long run This book is essential reading for those in the AEC industry as well as computer scientists **Journal of College Student**
