Karim, 2007-06-06 The conference proceedings of International Conference on Industrial Electronics Technology not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 50 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session The implemented conferencing technology starting with the submission review system and ending with the online conferencing capability allowed CISSE to conduct a very high quality fulfilling event for all participants See www.cissee2005.org/sections/IETA_TENE_EIAE **Fieldbus Systems and Their Applications 2003** D Dietrich, Jean-Pierre Thomesse, P Neumann, 2003-12-18 A proceedings volume from the 6th IFAC International Conference Puebla Mexico 14 25 November 2005 **Architecting Dependable Systems V** Rogério de Lemos, Felicita Giandomenico, Cristina Gacek, Henry Muccini, Marlon Vieira, 2008-08-26 As software systems become ubiquitous the issues of dependability become more and more crucial Given that solutions to these issues must be considered from the very beginning of the design process it is reasonable that dependability is addressed at the architectural level This book was born of an effort to bring together the research communities of software architectures and dependability This state of the art survey contains expanded and peer reviewed papers based on the carefully selected contributions to two workshops the Workshop on Architecting Dependable Systems WADS 2007 organized at the 2007 International Conference on Dependable Systems and Networks DSN 2007 held in Edinburgh UK in June 2007 and the Third Workshop on the Role of Software Architecture for Testing and Analysis ROSATEA 2007 organized as part of a federated conference on Component Based Software Engineering and Software Architecture CompArch 2007 held in Medford MA USA in July 2007 It also contains a number of invited papers written by recognized experts in the area The 14 papers are organized in topical sections on critical infrastructures rigorous design fault tolerance and verification and
